TROOPERS23 BATTLE BRIEFING

Attention:

Intel suggests the potential for multiple threat actors so practice enhanced OpSec and protect yourself at all times.

Disgruntled ex-employees could threaten critical systems and scrub the launch

OPERATION: "YOU'RE GROUNDED!"

Billionaire and media whore, Leon Skum, has engaged your team of operational security professionals to ensure the mission is a success.

SpaceREX founder, Leon Skum, announced he would be eliminating 75% of the company's workforce and replacing them with various AI's and automated systems. The following week SpaceREX fired critical teams at mission control and launch sites, replacing them with new automated workflow and logic.

Given the importance of the upcoming MEGA rocket launch, Leon wants to protect the stock price and his ego from any roque automation, disgruntled employees, hacktivists, criminals and opportunistic nation states.

This is why your team has been brought in to ensure the big launch goes off without a hitch. You will be given access to the mission control systems and other key assets in order to evaluate their security and reliability. You will have operational oversight of the actual launch systems including launch codes.

Since no baseline exists, all systems should be considered suspect.

Chatter on social media and some news outlets suggest, disgruntled employees and activist organization's plan to use the launch event as an opportunity to protest SpaceREX and expose their anti-environmental practices.

In the darker corners of the Internet, more sinister speculation is being shared in the form of conspiracy theories and "Ocean's Eleven" style shenanigans. Don't get distracted. Focus on the mission objectives and protect yourself at all times.

Your Mission: You and your team of elite Cyber-Physical operations specialists must secure the operational environment, identify and neutralize any threat agent operatives, assets and command & control capabilities to ensure a successful launch.

Beyond Embedded:

In the age of the Internet of (Deadly) Things the line between the physical and digital no longer exists. Do you have what it takes to Attack, Defend and Survive?
